

SMART NETWORKS

Smart Choice Communications is a dynamic and highly specialized internet (ISP) and private MPLS provider. With offices throughout the continental United States and Canada, we collaborate with clients both domestically and internationally to design and implement solutions that meet our standard of reliability and integrity.

Internet Solutions

- Smart T1
- Smart EoF
- Smart EoC
- Smart Broadband
- Smart Wireless

Features

- Dynamic WAN Bandwidth Allocation
- Unlimited IP Addresses
- QoS and CoS Support
- WAN & LAN Management
- Network Redundancy

Security & Monitoring

- Event Logs
- Network Monitoring Tools
- Penetration Testing
- Security Audits
- Vulnerability Scanning

INFRASTRUCTURE

Smart Choice Communications' geographically redundant private cloud is housed in three world class data centers: Telx in New York City, Bluebird Underground in Springfield, Missouri, and 1 Wilshire in Los Angeles, California. These data centers are N+1 rated with direct access to hundreds of leading network providers, which yields superior network redundancy and reliability.

As a Cisco value-added reseller (VAR) partner, SCC understands the importance of partnering with industry leaders and innovators. Our MPLS network hardware is comprised of Cisco certified switches, routers and firewalls. Our network hardware and infrastructure is deployed, managed and maintained by Cisco certified network engineers with years of industry experience and expertise.

NETWORK SECURITY & MONITORING

Smart Choice Communications employs comprehensive access control policies. This includes, but is not limited to, biometric scanning, card access and dual authentication. All employees and contractors who engage with SCC equipment are required to sign a non-disclosure agreement, with access controls maintained directly by our Chief Technology Officer.

Our private cloud MPLS is continually monitored by agent software that is deployed on servers and network equipment. Usage, access and volatility reports are sent directly to SCC's CTO and network operations center. SCC authorized technicians are available to be deployed 24/7/365 should there be an issue at our data centers.

Smart Choice Communications partners with ILECs and CLECs, such as:
