

SMART PORT SCAN

With the looming threat of cyber hacking and data breaching, **Smart Choice** wants to ensure your information is protected at all times. **Smart Scan** equips your network to prevent attacks by analyzing and monitoring open ports on your server. Applications and services utilize open ports to transmit data, often opening doorways to possible risks of malware infections, denial of service attacks (DoS), stolen data and much more. Smart Scan takes the necessary steps to safeguard your data by identifying vulnerabilities and simulating attacker behavior to accurately implement the appropriate defense and security protocols.

BENEFITS

Remote Penetration Testing

We remotely mimic attacker's behavior to discover vulnerabilities and identify open ports that could potentially lead to malicious activity (i.e. viruses, malware and breaches).

Intelligent Banner Grabbing

SCC extracts key information about your network and the services running on its open ports, allowing you to pinpoint vulnerabilities and exploits.

Onsite & Offsite Consulting

Our expert SCC Technicians are available to examine your network and network devices on-premise or offsite remotely.

24x7x365 Security & Monitoring

SCC's Security Experts monitor your network 24x7x365 to offer full support and resolve potential issues before they cause any harm to your data.
