

SMART HOTELING

Technology is constantly evolving, and the business world can evolve right along with it. As traditional laptops and mobile devices alike offer users new ways to work and communicate from anywhere, it's easier than ever for company teams to stay connected, no matter who's in the office, and who's on the go.

With solutions like SCC's Smart Hoteling, companies can lower costs and elevate workflow by granting employees access to a company network simply by dialing in from a compatible IP desk phone. While the company's physical office phones can be programmed in to include multiple users from any office location, each employee is assigned a unique set of credentials and a designated star code to let them:

- Remotely log in to the enterprise network.
- Make calls using the assigned user number.
- Access voicemail.
- Join important conference calls.
- Connect with national or global locations.

The Smart Hoteling feature lets callers join in from another town, city, or country, all to help a company team stay together, and stay successful.
